About Me

Project

User's facial emotions based on music recommendations

In my project it was Certainly! The project involves using facial emotion recognition technology to analyze users' facial expressions while they listen to different music recommendations. By monitoring facial cues su ch as smiles, frowns, or other expressions, the system aims to gauge the emotional impact of the suggested music. This data can then be used to refine and personalize future music recommendations based on the user's emotional response, enhancing the overall user experience with more tailored music suggestions.
